

Townships Online

Discover Why Many Municipalities
Have Chosen Townships Online[®]

Simplifying Busy Municipalities.

Residential Information 24 hours a day, 7 days a week.

Normal municipalities are open from 8:30am until 4:30pm. This is still a rough week when your residents or business owners are calling non-stop into your offices. Townships Online can reduce these calls during the day and solve issues late at night by offering your residents or business owners information at their fingertips at any time, day or night.

Save Paper, Time and Money

By letting your residents have access to numerous documents online, you can save paper, time and money. Some townships or municipalities take advantage of this little feature of the website by posting hundreds of applications, licenses, documents, forms and legal documents. The users can then access them via your new Townships Online Website. It's easy as 1-2-3.

Schedules: Let them know when

Further your community interest by keeping your meeting schedule up-to-date. Your meeting schedule can be a blog that tells the user time, date and location. You can include specifics such as the meeting agenda, what to wear and when the meeting will conclude.

Up to the Minute News

Your website will include a "What's New" section as well as an events calendar for important events. The news section can be comprised of school or business closings, important alerts or information that lets your residents know what's going on in your township or municipality.

Permission-Based Content Management

Perhaps the most glorious part of a Townships Online website is the CMS, or Content Management System. Having up-to-date website content is very important to keep your users visiting over and over again. We have designed and created a Content Management System (CMS) that will allow you to modify your own website content from anywhere there's an Internet connection. What's more, you can designate what user can update each specific section. For instance, if Joe is responsible for updating the leaf collection schedule, his login will limit him only to that section of the website. He will not be able to update other sections such as the Meeting Schedule. The user login is a secure 128-bit encryption certificate that prevents hackers from entering your system.

Meeting Minutes and Agendas

We understand the need for the public to have access to such things as your meeting minutes and agendas. That's why we have created a section of the Townships Online websites for this. After every meeting, a specified person can copy and paste the meeting minutes into the Content Management System for the public to view. They can also access a section where meeting agendas can be posted for upcoming meetings.

Complete Subsections Available

For more complex departments of your municipality, subsections or submenus are available. For instance, your public works department may include subsections such as waste management, snow removal, recycling, street lights, etc. When a user clicks on public works, they will be presented with a submenu with these options.

Photo Galleries That You Can Update

Another fantastic portion of a Townships Online website is the photo galleries. This neat little feature allows you, the administrator, to easily add photographs to your photo galleries. The galleries can contain categories and subcategories alike. The photo galleries include features such as:

- Auto-resizing of images
- Auto thumbnailer
- Multiple galleries and categories
- Multiple pages for large galleries
- ... and much more.

Municipal Court Information

Many townships and courts are often flooded with the same questions every day such as: Who do I make the check out to? What should I wear to court? Are cameras allowed in the courtroom? Can I pay my fines online? What happens if I don't show up for court? Reduce the amount of phone calls that your court clerk receives by offering these frequent questions on your Townships Online website.
